

PROJECT DESIGN PHASE – 3

Proposed Solution

Date	30 September 2026
Team ID	SWTID-2026-2597
Project Name	Streamlining IT Procurement – Automating Standard Laptop Orders with Flow Designer
Team Leader	SANTHIYA M
Maximum Marks	2 Marks

Team Members

- SANTHIYA M (Team Leader)
- SRIDHARSHINI T
- SARAL NILA M
- ROSHINI R / RITHIKA S

Proposed Solution Template

S.No	Parameter	Description
1	Problem Statement (Problem to be solved)	Standard Laptop procurement requires manual coordination for task creation and Hardware assignment, causing possible delays.
2	Idea / Solution description	Create a Flow Designer flow named “Standard laptop task”. When the Standard Laptop catalog request is triggered, it automatically creates a Catalog Task.
3	Novelty / Uniqueness	Directly connects the Service Catalog request to Flow Designer automation with predefined task values.
4	Social Impact / Customer Satisfaction	Reduces waiting time and manual follow-up, gives the IT team clear task ownership, and improves the procurement experience.
5	Business Model (Revenue Model)	Internal IT process improvement through reduced manual effort, better resource utilization and faster laptop provisioning.
6	Scalability of the Solution	The same pattern can be extended to monitors, keyboards, desktops and other standard hardware items.

Proposed Solution Flow

Standard Laptop Catalog Item → User Places Order → Request Created → Request Approved → Requested Item Generated → Flow Designer Triggered → Catalog Task Created → Hardware Group → Laptop Configuration

Phase 3 Outcome

The solution provides an automated and scalable approach for standard laptop procurement, with clear task ownership and reduced manual intervention.
