

PROJECT DESIGN PHASE – 2

Solution Architecture

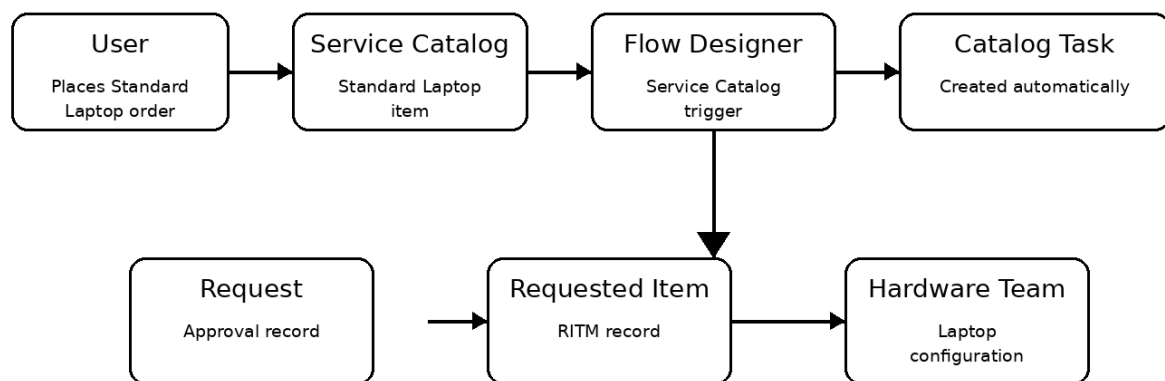

Date	30 September 2026
Team ID	SWTID-2026-2597
Project Name	Streamlining IT Procurement – Automating Standard Laptop Orders with Flow Designer
Team Leader	SANTHIYA M
Maximum Marks	4 Marks

Team Members

- SANTHIYA M (Team Leader)
- SRIDHARSHINI T
- SARAL NILA M
- ROSHINI R / RITHIKA S

Solution Architecture

The Service Catalog request starts the workflow, Flow Designer creates the required Catalog Task, and the Hardware team performs laptop configuration.

End-to-end flow: Order → Approval → Requested Item → Automated Catalog Task → Hardware Team

Figure 1. Solution architecture and data flow for automated Standard Laptop procurement.

Component	Purpose
Service Catalog	Provides the Standard Laptop catalog item and captures the request.
Service Catalog Trigger	Starts the Flow Designer process.
Flow Designer	Automates task creation without manual intervention.
Requested Item (RITM)	Stores the individual Standard Laptop request.
Catalog Task (sc_task)	Created with description, approval and assignment group.
Hardware Assignment Group	Receives the task and performs laptop configuration.

Architecture Outcome

The architecture provides a consistent automated path from the Standard Laptop request to Hardware task assignment.
