

PROJECT DESIGN PHASE – 1

Problem – Solution Fit

Date	30 September 2026
Team ID	SWTID-2026-2597
Project Name	Streamlining IT Procurement – Automating Standard Laptop Orders with Flow Designer
Team Leader	SANTHIYA M
Maximum Marks	2 Marks

Team Members

- SANTHIYA M (Team Leader)
- SRIDHARSHINI T
- SARAL NILA M
- ROSHINI R / RITHIKA S

Problem – Solution Fit Canvas

This canvas identifies the target users, procurement problems, triggers, constraints, available solutions and the proposed solution fit for automated Standard Laptop procurement.

Parameter	Project Response
1. Customer Segment(s)	Employees/end users requesting standard laptops; IT Procurement team; Hardware/IT support team.
2. Jobs-to-be-Done / Problems	Users need standard laptops ordered and configured quickly. Manual handoffs can delay task creation and assignment.
3. Triggers	New employee onboarding, laptop replacement, upgrade request, new project allocation, or a standard laptop procurement request.
4. Emotions: Before / After	Before: waiting, uncertainty and frustration. After: faster processing, clear task ownership and improved satisfaction.
5. Customer Constraints	Approved catalog item, budget, laptop availability, approval requirement, IT policies and Hardware team capacity.
6. Process Limits	The process should use the approved ServiceNow catalog and Flow Designer while avoiding unnecessary manual intervention.
7. Available Solutions	Manual procurement follow-up, emails/tickets, existing ServiceNow processing, and the proposed Flow Designer automation.
8. Channels of Behaviour	ServiceNow Service Catalog, request/approval records, Requested Item, Catalog Task and Hardware assignment queue.
9. Problem Root Cause	Manual task creation and assignment, delayed handoffs, oversight during configuration and lack of a consistent automated workflow.
10. Your Solution	A Flow Designer flow triggered by a Service Catalog request automatically creates a Catalog Task, sets it to Approved and assigns it to Hardware.

Phase 1 Outcome

The project addresses the procurement problem by automating task creation and Hardware assignment, reducing manual handoffs and user waiting time.
